

Ferospan

Timed Release Capsule

Composition : Ferospan timed release capsule is a combination of blended pellets of dried Ferrous Sulphate 150mg and Folic Acid 500mcg.

Indications : Ferospan is indicated for the treatment and prophylaxis of iron and folic acid deficiency, specially during pregnancy and lactation.

Contraindication : Hypersensitivity to any component of the drug.

Dosage & administration : 1 capsule daily throughout pregnancy and lactation or as directed by the physician.

Adverse effects : Dark stools are usual during iron therapy and nausea and other symptoms of gastrointestinal irritation, such as anorexia, vomiting, discomfort may occur.

Precautions : Absorption of iron may be impaired by penicillamine and by antacids. Such potential interactions can be reduced by separating administration of each product by several hours.

Packing : Ferospan 6 x 10's capsules in blister pack.
