

Composition : Urea 100mg.

Indications : Urea cream is indicated for Ichthyosis and dry skin conditions, cracked skin of feet, management of eczemas, management of psoriasis.

Dosage and administration : Urea cream is applied topically. Wash affected areas well, rinse off all traces of soap, dry and apply sparingly twice daily. Occlusive dressings may be used, but are usually unnecessary because of the self-occlusive nature of the cream. Or as directed by the registered physician.

Side effects : No serious toxicity has been reported with topical urea. Historically it is considered a safe drug. But on some occasions, topical urea has been shown to cause burning and irritation, if applied to inflamed, broken or exudative skin eruptions.

Contraindication : It is contraindicated in those patients with hypersensitivity to Urea or any of the excipients contained in the cream. In some instances, Urea 10% cream may cause local irritation and edema, when applied to sensitive skin. If the condition is aggravated or there is no improvement the doctor should be consulted.

Use in Pregnancy and lactation : Urea cream can be used during pregnancy and lactation.

Precaution : It is for external use only. Patient should be avoided contact with eyes.
